

DATA SOVEREIGNTY + SECURITY

N2W runs inside your own AWS, Azure, or Google Cloud account, so you keep complete control over your data. Data never leaves your cloud.

COST-EFFECTIVE COMPLIANCE

Eliminate the risk of downtime while keeping your data secure, available, and compliant with cross-region, cross-account, or cross-cloud abilities. Plus get a centralized and comprehensive view of all your policy setups with automated reporting.

FULLY RECOVERABLE EKS

Protect Kubernetes the way you protect everything else with cross-region/account EKS recovery, application-consistent backups, and label-based cluster and namespace selection.

1 platform. 3 clouds. Complete Protection.

MINIMIZE RPO, NEVER LOSE VALUABLE DATA

Prevent anyone, even the root user, from altering or deleting backups with Compliance Mode Immutability for EBS, S3, Wasabi, or Azure. Perform backups of encrypted resources into other accounts or regions. Minimize RPO with a 60s backup interval. Recover anything, from a single file to your entire environment.

RECOVERY SCENARIOS = FOOLPROOF FAILOVER

Configure automated failover into a different region or account. Change instance sizes or the IP address (or any configuration you want to change). Set the order in which resources should come back online. And ensure your data will always be recoverable with automated (and cost-free) DR “dry run” drills.

PROTECT YOUR NETWORK CONFIGURATIONS

N2W protects network configurations so you can restore back to a production state. Enable automatic backups of all your AWS VPC configurations. Ensure traffic is routed to healthy targets and evenly distributed with support for all flavors of ELB. Plus attach a new NIC or IP address on restore so machines land straight back on the right network. Azure VNets capture and clone the same way.

COST SAVINGS FOR DR, STORAGE & COMPUTE

N2W archives incrementally, not full snapshots, so you save money. Also, you can archive into any S3 tier and auto-delete the original snapshot. You could even archive cross-cloud into Azure Blob Cold or Wasabi. And get instant savings by using AnySnap Archiver to import + archive existing snapshots. Plus you can lower compute costs with Resource Control for AWS and Azure.

Features at a glance

AVAILABILITY A AWS Az Azure G Google Cloud

N2W is available in the AWS, Azure, and Google Cloud Marketplaces, and you can manage backup and recovery of all three from a single N2W console.

Backup and Recovery

Backup & recovery of AWS volumes and instances	A
Backup & recovery of Azure VMs, disks, and SQL servers	Az
Backup & recovery of Google Cloud VMs and Persistent Disks	G
Application-consistent, agentless backups	A Az
File and folder-level recovery with easy search	A Az
File-level recovery from Amazon EFS	A
Amazon S3 backup & restore; and S3 bucket sync	A
Protect SAP HANA in-memory databases	A
App-consistent EKS backup with label-based cluster + namespaces	A
Compliance Mode Immutability for EBS, S3, Wasabi, and Azure	A Az
Capture + Clone VPC, Transit Gateways, ELB, and Azure VNet	A Az
NIC/IP support during AWS instance restore	A
Add up to 100 unprotected resources to a policy in one click	A Az
Runs in AWS GovCloud, Azure Government, and the AWS European Sovereign Cloud	A Az

Cost Optimization

Archive to low-cost storage (including Azure Blob Cold)	A Az
Archive to Wasabi's S3-compatible storage	A Az
Import + immediately archive any EBS snapshots	A
ZeroEBS/ZeroMD option for archived data	A Az
Resource Control: start/stop instances on a schedule	A Az
Monitor Amazon EBS backup spend with Cost Explorer	A
Track EBS volume usage and set threshold alerts	A
Intelligent, scalable worker instances	A Az
Flags Google Cloud disks that already have native snapshot schedules	G
Monitor cost savings from your dashboard	A Az
Transparent, fixed pricing, regardless of VM size	A Az G

Disaster Recovery

Cross-region, cross-account, and AWS-to-Azure cross-cloud restore	A Az
Cross-region backup and DR for Google Cloud	G
Recover an AWS VM snapshot as a bootable Azure VM (Ubuntu only)	A Az
Rapid 1-click failover/failback with Recovery Scenarios	A Az
Schedule DR drills and automate DR "dry runs"	A Az
EKS cross-region and cross-account recovery	A
Cross-region DR for DynamoDB	A
True cross-cloud air-gapping	A Az
Supports custom encryption keys for DR	A Az
Enable additional checks with 'Secured DR Account'	A
Choose a different # of generations to store for DR	A Az

Onboarding & Management

Available in the AWS, Azure, and Google Cloud Marketplaces	A Az G
Easy install from Marketplace or a CloudFormation template	A Az
Daily retention alongside weekly, monthly, and yearly in one policy	A Az
Purely time-based retention, with the minimum-generation rule optional	A Az
Time or generation-based retention periods	A Az
Protection Overview widget for coverage gaps	A Az G
Centralized, comprehensive policy/compliance reports	A Az
Gain real-time backup alerts and monitor activity	A Az
Setup Multi-Factor Authentication for users	A Az
Designed for multi-tenancy and IAM support	A Az
Custom tagging options and N2W Tag Assistant	A Az
CLI and RESTful API for custom integrations	A Az
Integrate with 3rd party data tools	A Az
Smart retries for efficient policy execution	A Az
Technical support for all paid plans	A Az G

20+ SERVICES COVERED

A Amazon EC2, Amazon EBS, Amazon S3, S3 Glacier, Amazon EFS, Amazon FSx, Amazon RDS, Amazon Aurora, Amazon DynamoDB, Amazon DocumentDB, Amazon Redshift, Amazon EKS, Amazon VPC, AWS Outposts, Wasabi

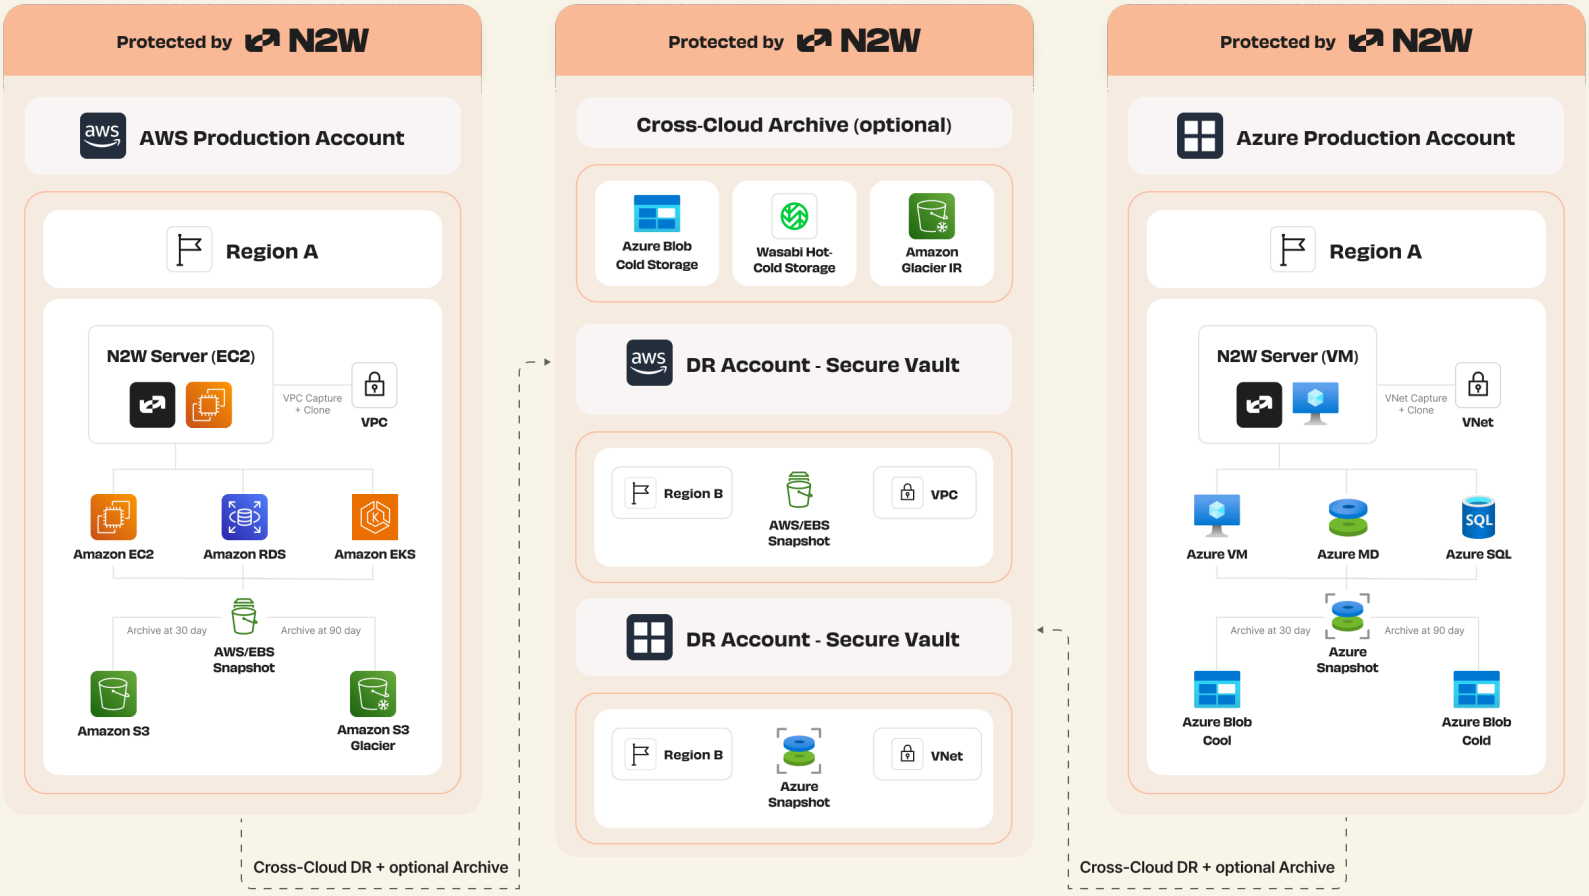

Az Azure VMs, Azure Disks, Azure SQL, Azure Blob

G Compute Engine, Persistent Disk

Multi-cloud, managed from a single console for simple, reliable backup & DR

N2W runs as an instance in your own AWS, Azure, or Google Cloud account. Snapshots stay cloud-native, DR copies land in a separate account and region, and archives tier into the storage you choose.

AWS and Azure production accounts, each with their own N2W server, DR vault account, and optional cross-cloud archive tier.

Backup and DR inside your sovereign boundary

AZURE GOVERNMENT

US Gov Virginia, US Gov Texas, US Gov Arizona, US DoD Central, and US DoD East. The environment carries FedRAMP, DoD SRG, and DoD IL2, IL4, and IL5 provisional authorizations.

AWS EUROPEAN SOVEREIGN CLOUD

A physically and logically separate AWS partition, operated within the EU by EU citizens, with its own root account structure, IAM, and billing. The partition carries ISO/IEC 27001, SOC 1/2/3, and BSI C5.

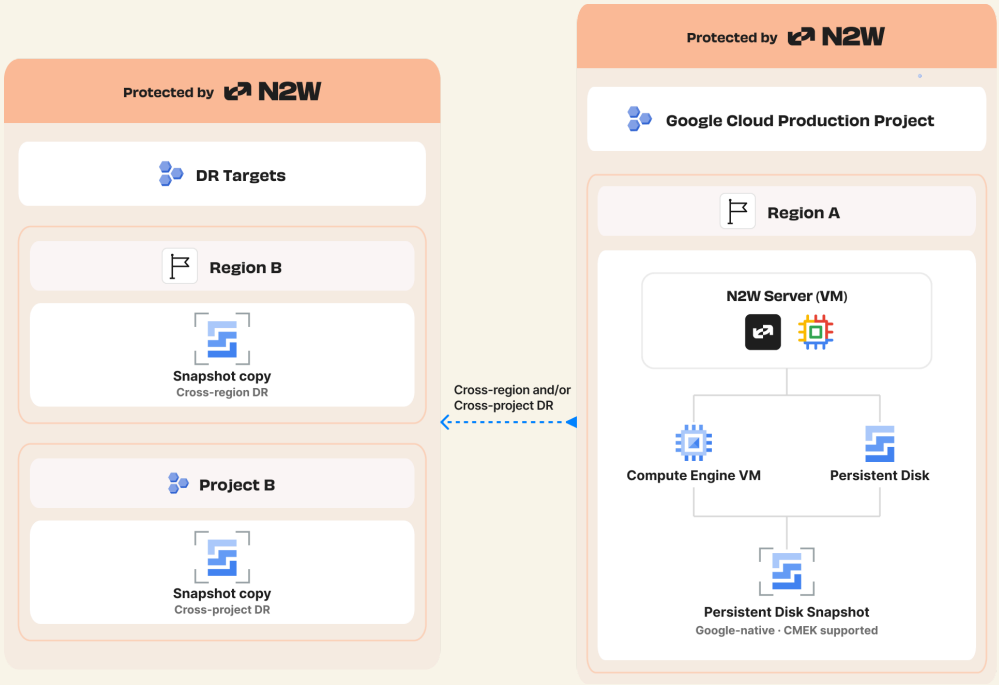

N2W never takes custody of your data or your keys, so it introduces no compliance gap at the backup and DR layer.

Now protecting Google Cloud

Google Cloud

Snapshots stay Google-native. DR targets can be another region.

Your Google Cloud VMs and Persistent Disks, backed up in your own project, in the same console as AWS and Azure. Recover across regions and across projects from a single source.

- Compute Engine VMs and Persistent Disks
- DR across regions
- Google default encryption and CMEK
- Labels and resource-manager tags
- Available as an image in the Google Cloud Marketplace

If a disk already has a native GCP snapshot schedule and you add it to an N2W policy, Google bills for both. N2W flags those resources so you see it before it reaches your invoice.

WHAT ELSE IS NEW IN 5.0

Bootable cross-cloud recovery

Recover an AWS VM snapshot as a bootable Azure VM (Ubuntu only).

Sovereign and government clouds

Runs in Azure Government and the AWS European Sovereign Cloud.

One-click protection

Add up to 100 unprotected resources to a policy at once, on AWS and Azure.

Who is N2W?

N2W was founded in 2012 with the mission of providing enterprise-class data protection for production environments deployed in the public cloud and was meticulously built from the cloud up to meet the backup & DR requirements of the most demanding customers. Now N2W is the leading enterprise-class backup, recovery, and disaster recovery solution for Amazon Web Services (AWS), Microsoft Azure, and Google Cloud.
