

DATA SOVEREIGNTY + SECURITY

N2W is hosted in your AWS and/or Azure environment giving you complete control over your data. Data never leaves your cloud.

COST-EFFECTIVE COMPLIANCE

Eliminate the risk of downtime while keeping your data secure, available, and compliant with cross-region, cross-account, or cross-cloud abilities. Plus get a centralized and comprehensive view of all your policy setups with automated reporting.

FULLY RECOVERABLE EKS

Protect Kubernetes the way you protect everything else with cross-region/account EKS recovery, application-consistent backups, and label-based cluster and namespace selection.

Turn Off Day: All, Sunday, Monday, Tuesday, Wednesday

Ridiculously easy, seriously fast, highly secure

MINIMIZE RPO, NEVER LOSE VALUABLE DATA

Prevent anyone, even the root user, from altering or deleting backups with Compliance Mode Immutability for EBS, S3, Wasabi, or Azure. Perform backups of encrypted resources into other accounts or regions. Minimize RPO with a 60s backup interval. Recover anything—from a single file to your entire environment.

COST SAVINGS FOR DR, STORAGE & COMPUTE

N2W archives incrementally, not full snapshots, so you save money. Also, you can archive into any S3 tier and auto-delete the original snapshot. You could even archive cross-cloud into Azure Blob Cold or Wasabi. And get instant savings by using AnySnap Archiver to import + archive existing snapshots. Plus you can lower compute costs with Resource Control for AWS and Azure.

PROTECT YOUR NETWORK CONFIGURATIONS

N2W protects network configurations so you can restore back to a production state. Enable automatic backups of all your AWS VPC configurations. Ensure traffic is routed to healthy targets and evenly distributed with support for all flavors of ELB. Plus attach a new NIC or IP address on restore for seamless network integration. With v4.6 you can capture and clone Azure VNets in the same way.

RECOVERY SCENARIOS = FOOLPROOF FAILOVER

Configure automated failover into a different region or account. Change instance sizes or the IP address (or any configuration you want to change). Set the order in which resources should come back online. And ensure your data will always be recoverable with automated (and cost-free) DR “dry run” drills.

Features at a glance

Backup and Recovery

- ☑ Time or generation-based retention periods
- ☑ Backup & recovery of AWS volumes and instances
- ☑ Backup & recovery of Azure VMs, disks, and SQL servers
- ☑ File and folder-level recovery with easy search
- ☑ Application-consistent, agentless backups
- ☑ Amazon S3 backup & restore; and S3 bucket sync
- ☑ Supports all AWS GovCloud regions
- ☑ Capture + Clone VPC, Transit Gateways, ELB, and Azure VNet
- ☑ File-level recovery from Amazon EFS
- ☑ Protect SAP HANA in-memory databases
- ☑ Compliance Mode Immutability for EBS, S3, Wasabi, and Azure
- ☑ NIC/IP support during AWS instance restore
- ☑ Smart retries for efficient policy execution
- ☑ App-consistent EKS backup with label-based cluster + namespaces

Disaster Recovery

- ☑ EKS cross-region and cross-account recovery
- ☑ Cross-region, cross-account, and cross-cloud restore
- ☑ Rapid 1-click failover/failback with Recovery Scenarios
- ☑ Supports custom encryption keys for DR
- ☑ Schedule DR drills and automate DR "dry runs"
- ☑ Enable additional checks with 'Secured DR Account'
- ☑ Cross-region DR for DynamoDB
- ☑ True cross-cloud air-gapping

Cost Optimization

- ☑ Monitor Amazon EBS backup spend with Cost Explorer
- ☑ Monitor cost savings from your dashboard
- ☑ Resource Control: start/stop instances on a schedule
- ☑ ZeroEBS/ZeroMD option for archived data
- ☑ Archive to low-cost storage (including Azure Blob Cold)
- ☑ Archive to Wasabi's S3-compatible storage
- ☑ Track EBS volume usage and set threshold alerts
- ☑ Import + immediately archive any EBS snapshots
- ☑ Choose a different # of generations to store for DR
- ☑ Transparent, fixed pricing—regardless of VM size
- ☑ Intelligent, scalable worker instances

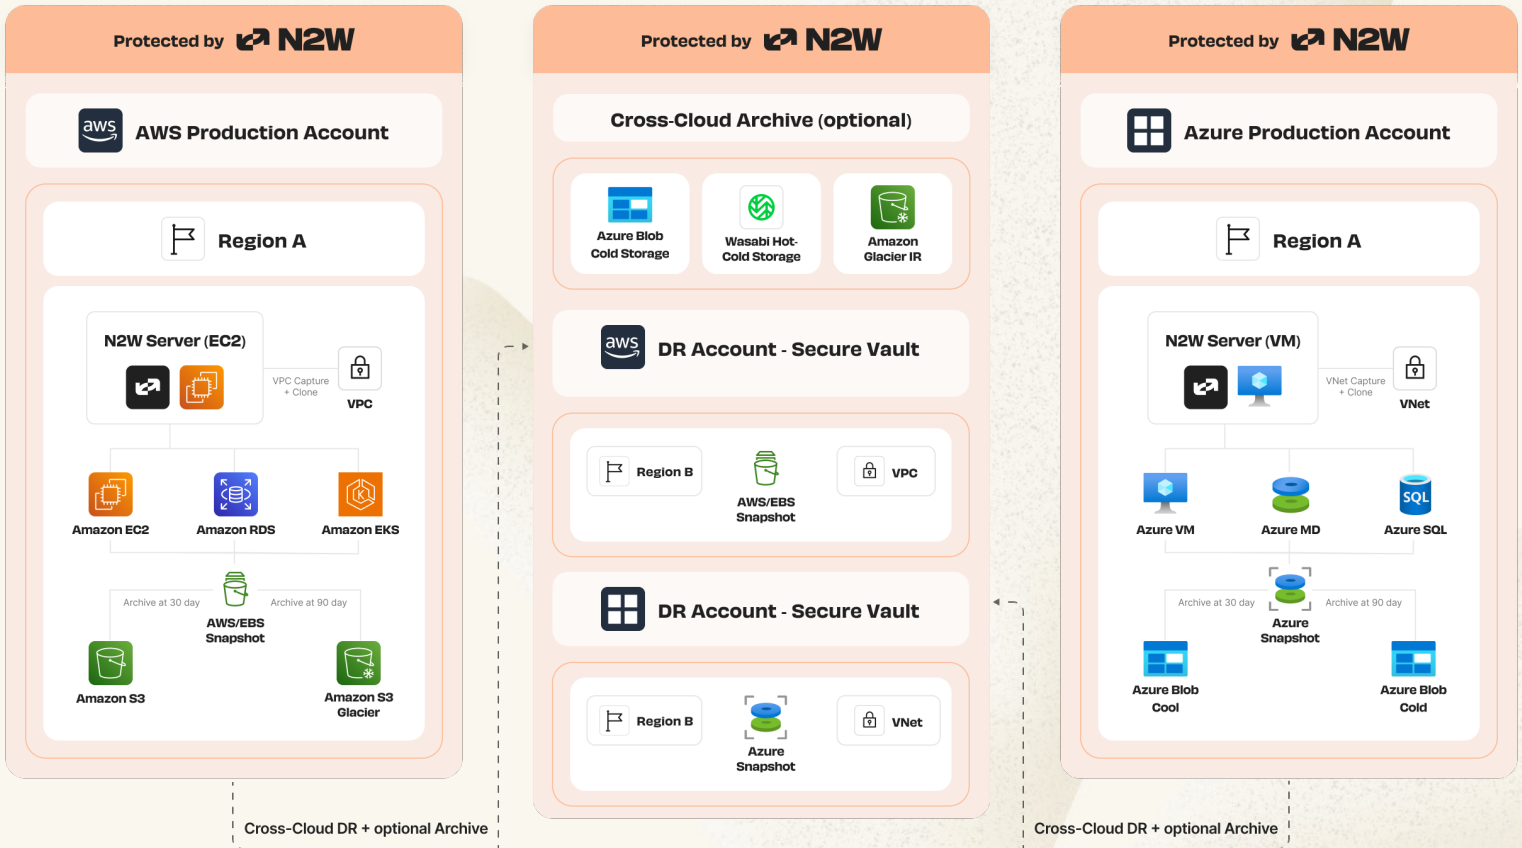

Onboarding & Management

- ☑ Easy install with a CloudFormation template
- ☑ Designed for multi-tenancy and IAM support
- ☑ Custom tagging options and N2W Tag Assistant
- ☑ CLI and RESTful API for custom integrations
- ☑ Protection Overview widget for coverage gaps
- ☑ Technical support for all paid plans
- ☑ Gain real-time backup alerts and monitor activity
- ☑ Integrate with 3rd party data tools
- ☑ Setup Multi-Factor Authentication for users
- ☑ Centralized, comprehensive policy/compliance reports
- ☑ Multi-retention in a single policy

☑ This symbol indicates the feature is also available for Microsoft Azure workloads. N2W is available in both AWS Marketplace and Azure Marketplace. You can manage backup and recovery of AWS and Azure workloads from a single, user-friendly N2W console hosted on either AWS or Azure.

Cross-cloud, immutable, always recoverable

Who is N2W?

N2W was founded in 2012 with the mission of providing enterprise-class data protection for production environments deployed in the public cloud and was meticulously built from the cloud up to meet the backup & DR requirements of the most demanding customers. Now N2W is the leading enterprise-class backup, recovery, and disaster recovery solution for Amazon Web Services (AWS) and Microsoft Azure.
