

TL;DR WEBINAR SERIES

Episode 13:

New in N2W v4.4

HOSTED BY

Sebastian Straub

Principal Solutions Architect

Alon Maimoni

Chief Revenue Officer

Long-term Azure storage for less? Yep.

DLM for Azure – using a cheaper storage tier

Ridiculously easy retention

With Vault Storage, backups chill in the most cost-effective tier—for long-term retention without the hefty price.

Highly secure DR storage

Cross-region, cross-subscription DR—because relying on a single location for failover? That's illogical. 🙅

Remarkably cost-effective

Eliminate unpredictable licensing fees—because your backups should be secure and free of surprises.

No hidden costs: Easy, all-inclusive pricing

\$5

1.2 TB VM
Backup + Retention
with N2W

Transparent pricing 🙌

Now calculating your Azure backup costs won't involve spreadsheets or guessing. N2W is just \$5 per VM. Easy.

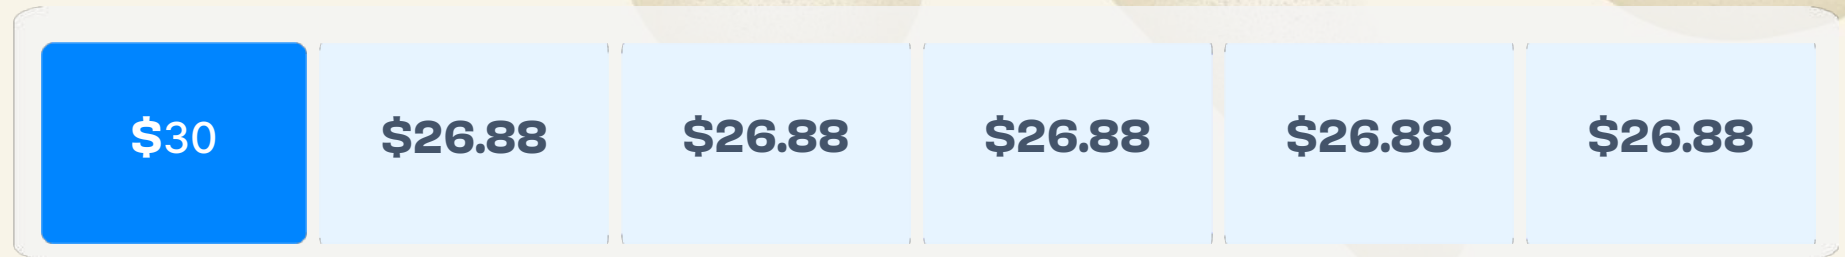

Your backup pricing is simple! 🌴

Azure pricing? It's tiered and depends on VM sizes. Think of it like a resort that charges extra for towels, Wi-Fi, and even the beach chair.

Save up to 80% on long-term storage (not a typo)

**Azure
Backup**

“Hello, Wasabi!”

Effortlessly automate archiving to Wasabi’s S3-compatible storage—because your backups deserve **fast retrieval and dirt-cheap storage**.

**No vendor
lock-in**

**Slash storage
costs**

**Seriously fast
retrieval**

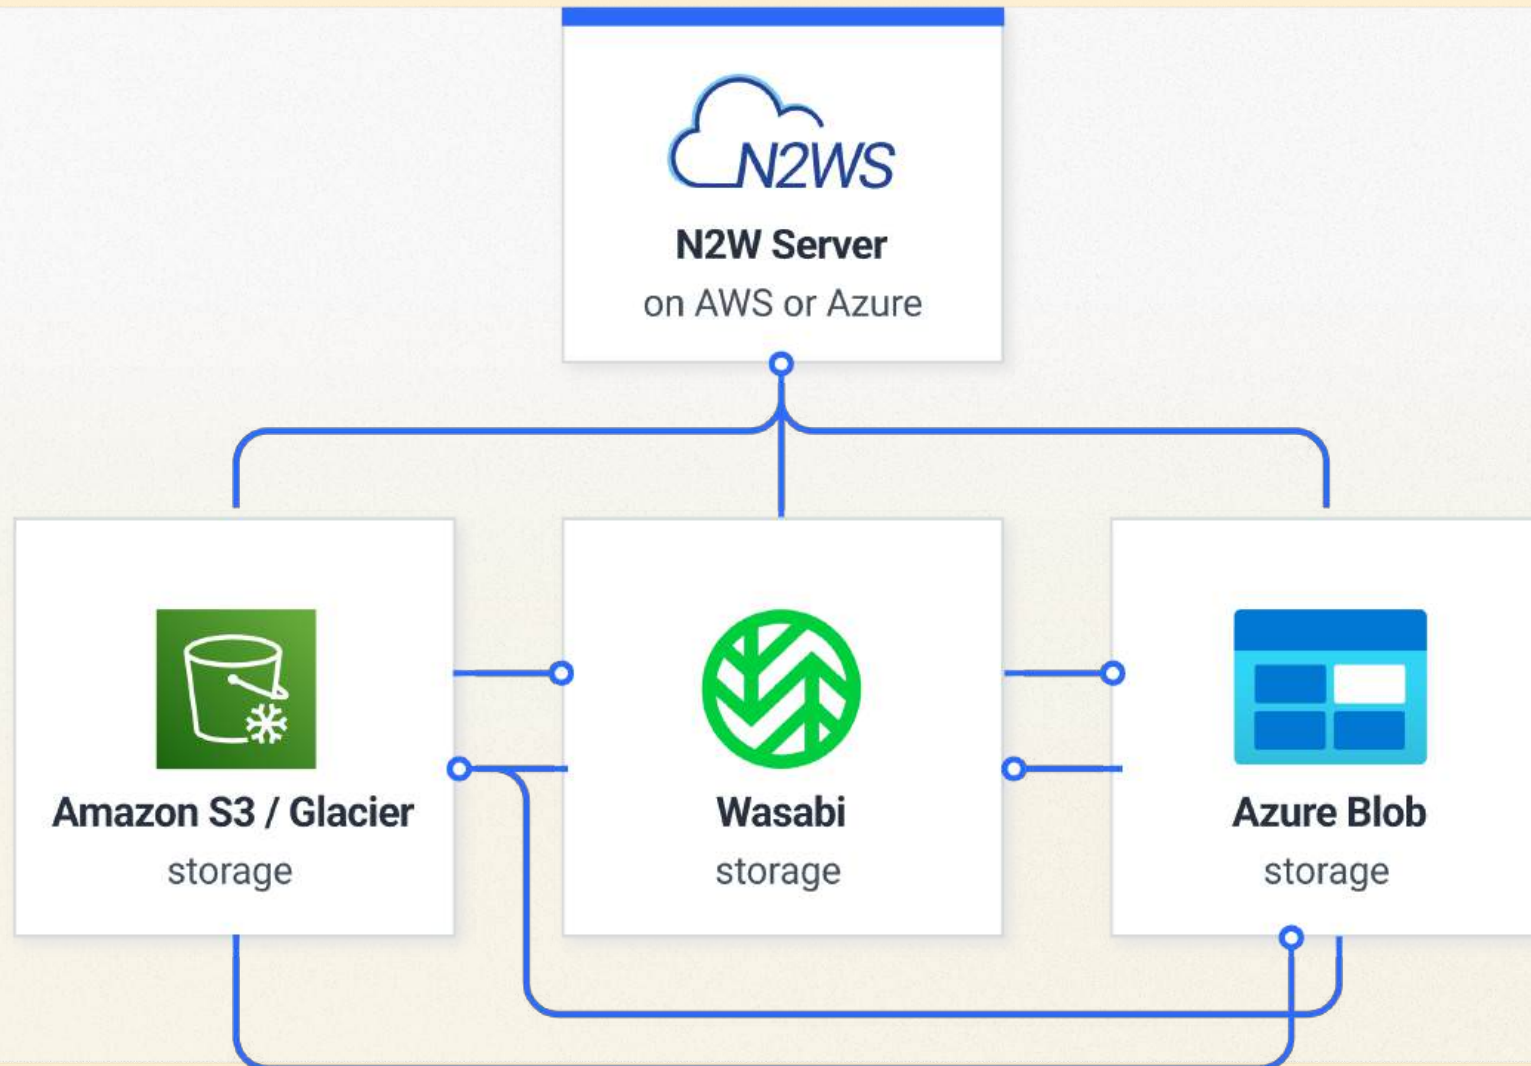

**Highly secure
cross-cloud**

**One console to
rule them all**

Storage? You've got options...

Faster. Smarter. Cheaper.
More flexible than ever.

New in Recovery Scenarios

Picture this: your production environment is down and your inbox is exploding. *Fear not!* N2W Recovery Scenarios get you back online fast. **Just click, restore, and go.**

Introducing: Custom Tags

Easily backup resources using any tag of your choice

Failover and Failback

Simplifies failbacks by marking DR targets

More options for FSx

Advanced restore options designed for high-performance Amazon FSx ONTAP storage.

Tag, you're in control

Removes the uncertainty of identifying resources during a planned failover or failback

Smart retries for efficient policy execution

✗ No more restarting backups from scratch

✓ Reattempt only the failed parts of the backup

✓ Save time, money, and improve peace-of-mind

Advanced Snapshot Tech

Faster. Smarter. Cheaper.
More flexible than ever.

Hello to major savings

Due to reduced chatter with updated cloud provider API integration, API requests cost even less money

Ridiculously easy, rapid snapshots ⚡

Generate snapshots at lightning speed for rapid read/write access across AWS, Azure, and third-party repositories.

Say sayonara to vendor lock-in

Seamlessly store and recover data across multi-cloud repositories—because your backups should work where you want them to.

Thank you!
